Using GIS in Behavioural Science and Health

- Welcome!
- Introduce GIS as a tool in your research
- Example of using GIS
- Things to remember
- Strengths and weaknesses
- Where do we find data?
- Spatial Analysis & New Developments
- Software & Common Issues
- Questions / Case Studies

What is GIS?

- Geographical Information Systems
- Turning (spatial) data into information

- Using this information to answer research questions
 - *“Where are groups of patients more likely to be suffering from obesity?”*

GIS

- Nearly all human activities & decisions involve geography
 - the “**where?**”
- Working with geographic information is **different** to working with a **CSV** file
- This is why we need specialized **GIS** software to:
 - **organize** and **store**
 - **access** and **retrieve**
 - **present** and **manage** spatial data
- But ultimately to apply to the solution of our **problem**

GIS: Systems and Science

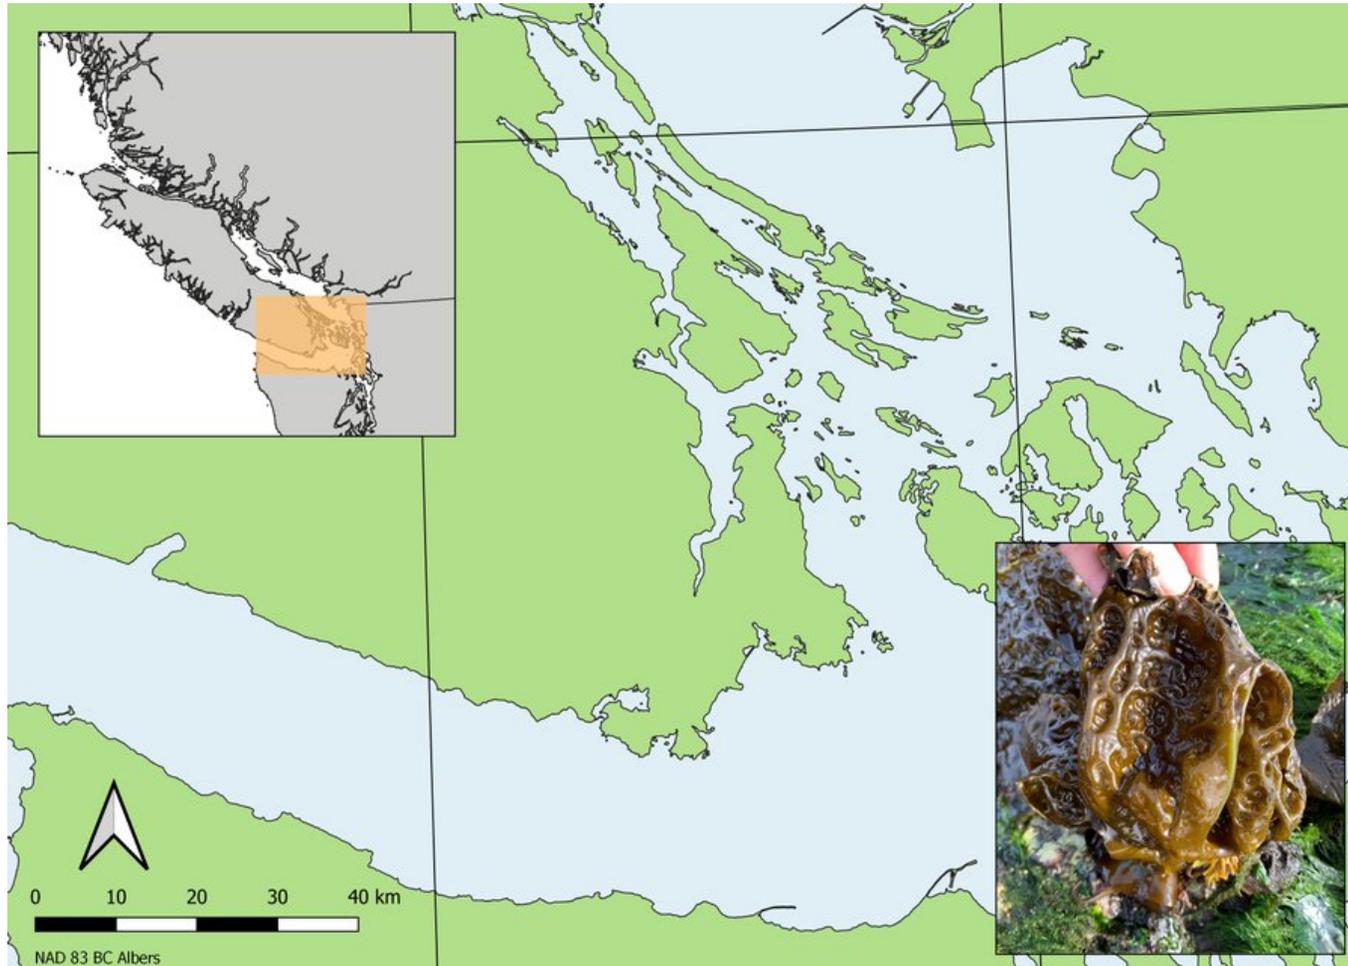

- Geographical Information **Systems**
 - The methods, process and technology we use
- Geographical Information **Science**
 - The science behind the technology
 - Including development of new technology, methods and processes
- Geographical / Geographic
- Geographic Data Science

Examples of using GIS

- making maps: your study area
- showing data: choropleth maps, rates of disease
- spatial statistics: is space important? clustering & regression
- spatial analysis: where meets x criteria?

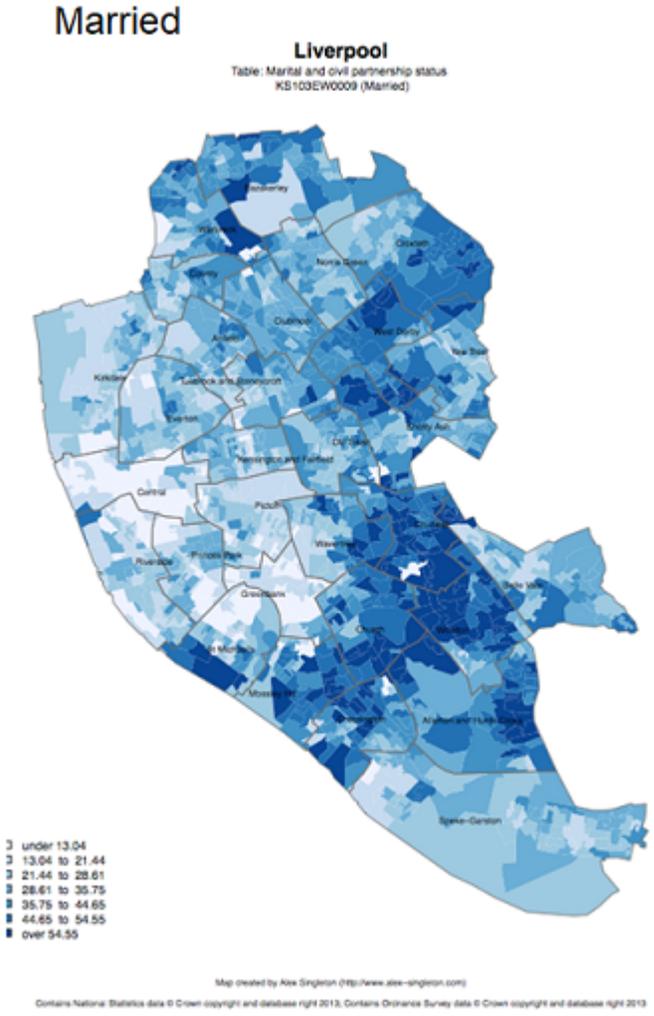

Making Maps:

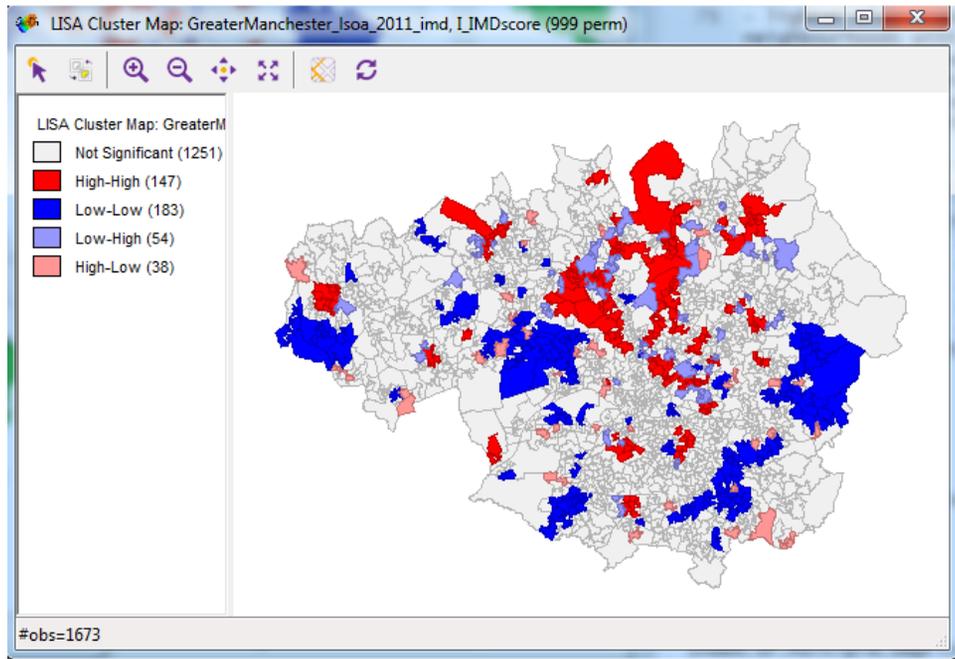

- Your study area
- *Getting excited for my first summer of fieldwork with a study site map I created during today's GIS workshop at #PEEC2022*
- Rebecca Hansen, [Twitter](#)

Showing Data:

- Choropleth maps
- Rates of disease
- % Married, Census data, 2011

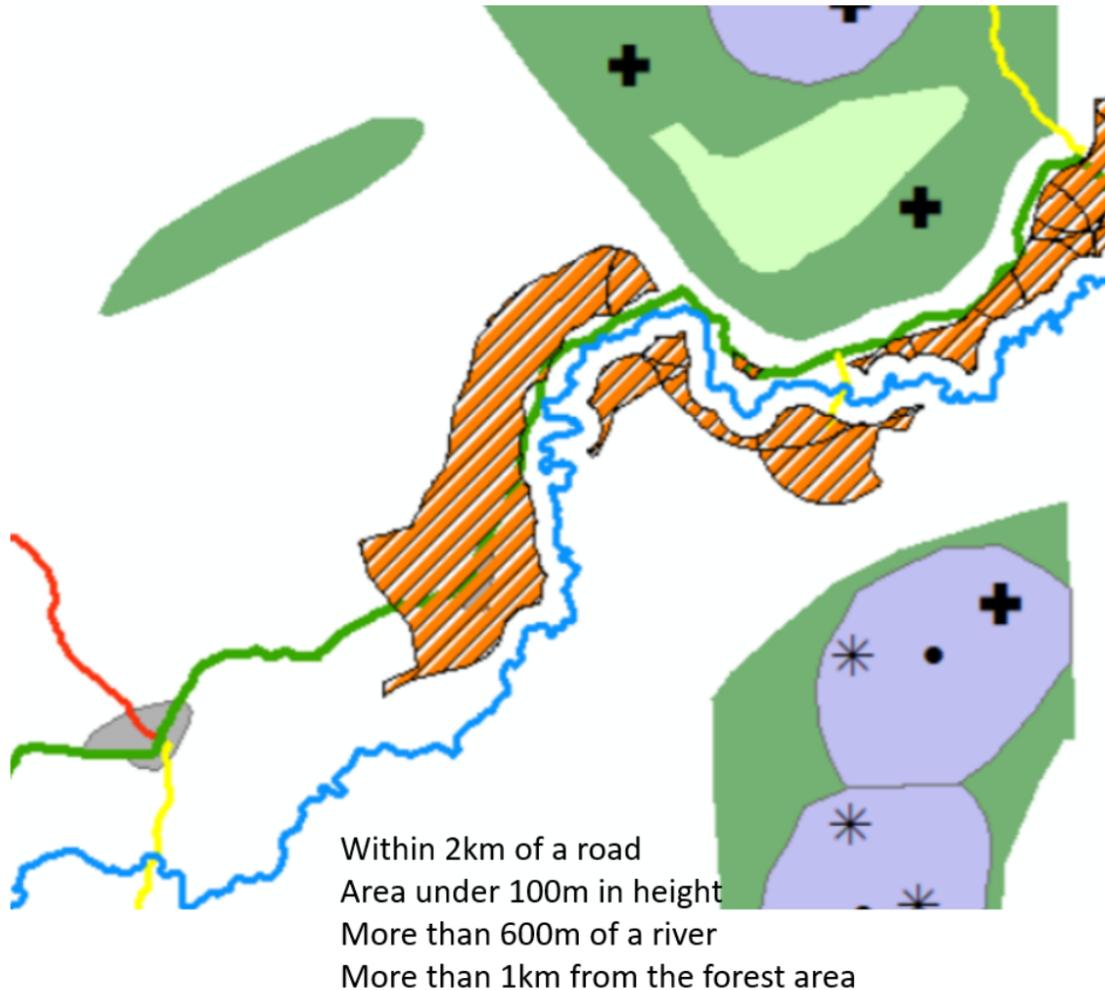

Spatial Statistics:

- Is space important? (Spatial autocorrelation / Moran's I)
- Clustering? (Local Moran's I)
- Regression? (What is driving these relationships?)
 - GWR - geographically weighted regression
 - Full spatial regression

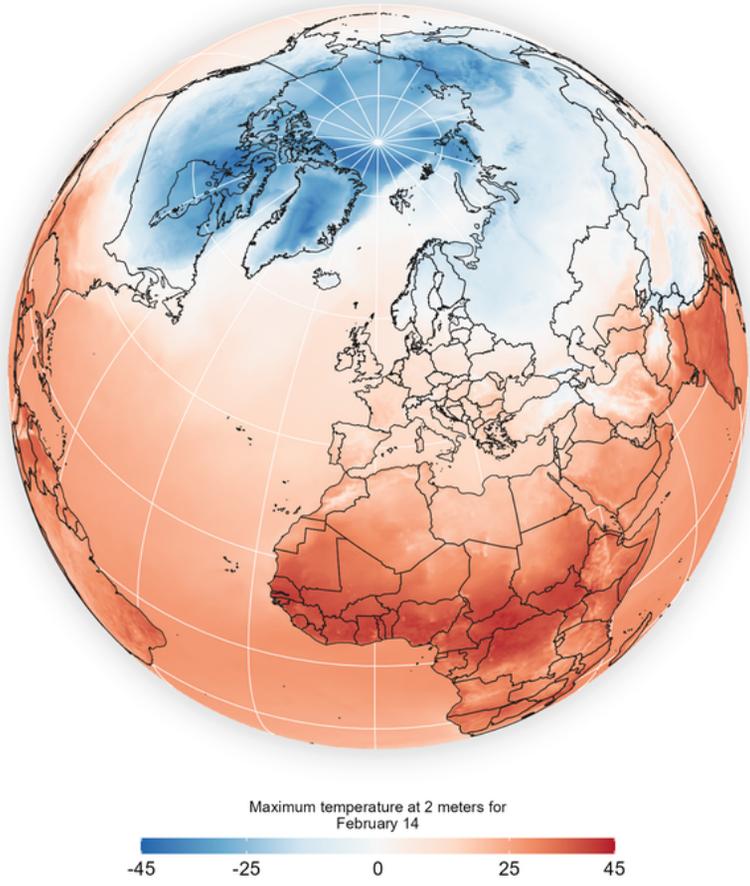

Map of Greater Manchester, UK, showing clustering areas of high deprivation (red) and low deprivation (blue) (measured using IMD).

Spatial Analysis:

- Where meets x criteria?
- Which site meets criteria for a new hospital?
- How can public transport help address deprivation?
- Where should we route a water pipe?

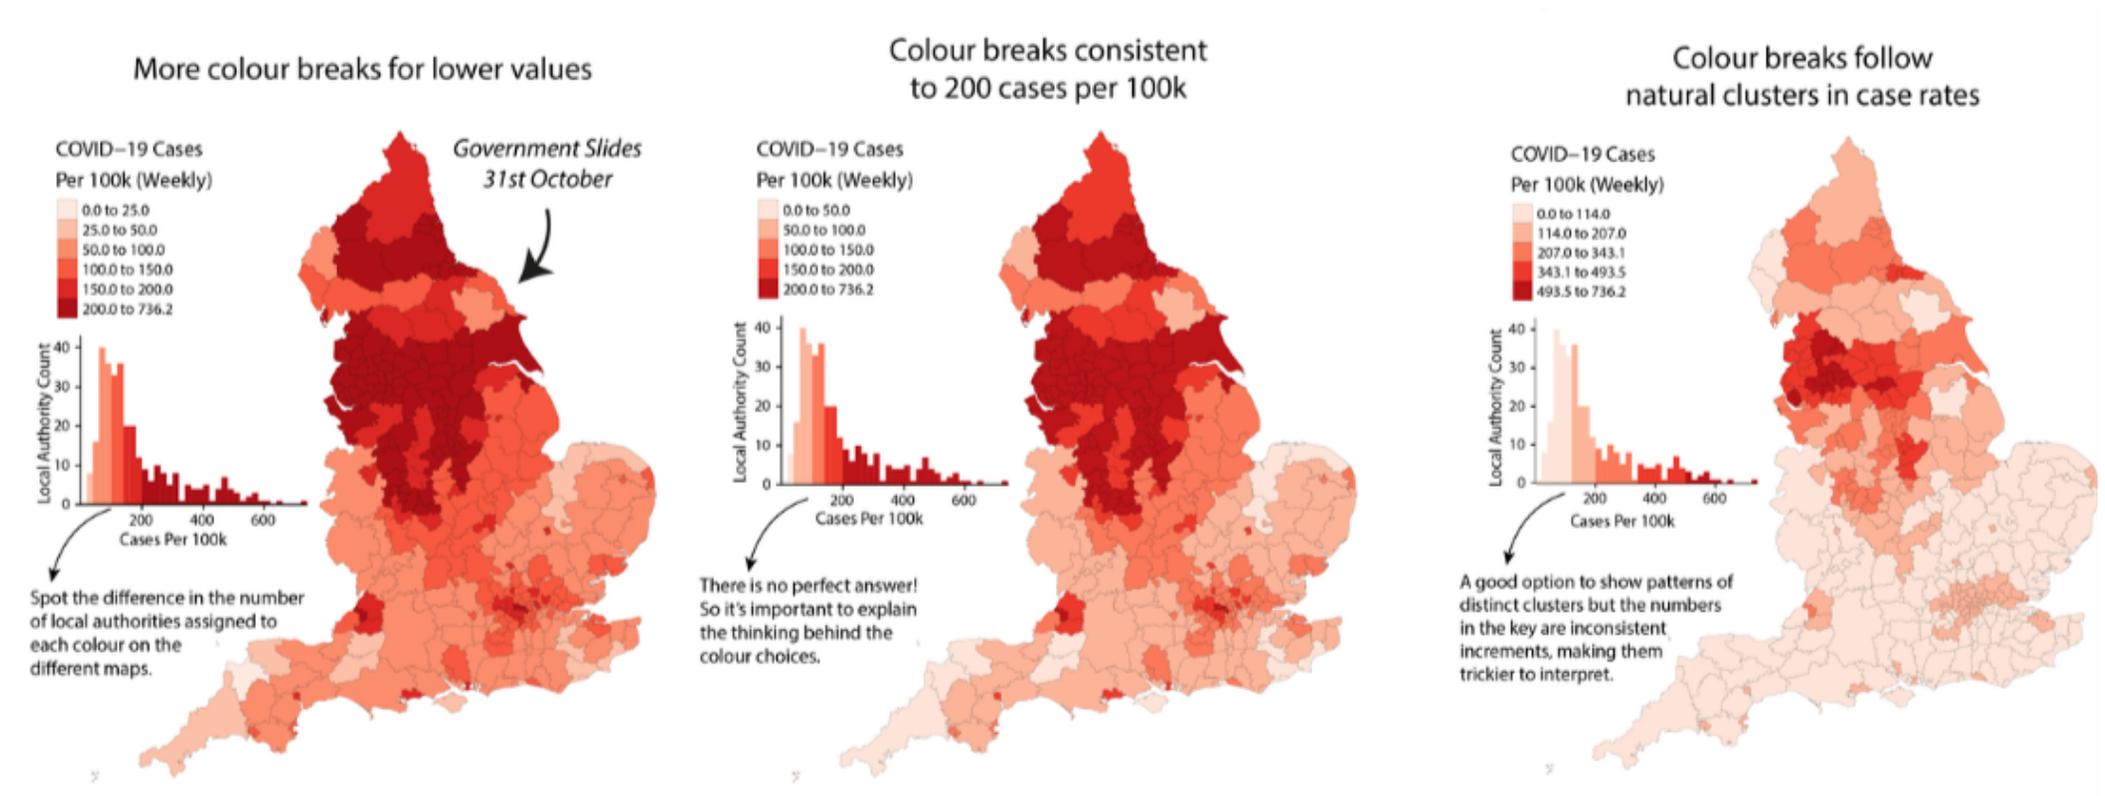

Weather

Tomorrows Weather - https://dominicroye.github.io/en/2023/tomorrows-weather/?utm_source=puntofisso&utm_medium=email

Things to remember!

- Like “*correlation <=> causation!*”
- Be critical of maps - they are not what they seem

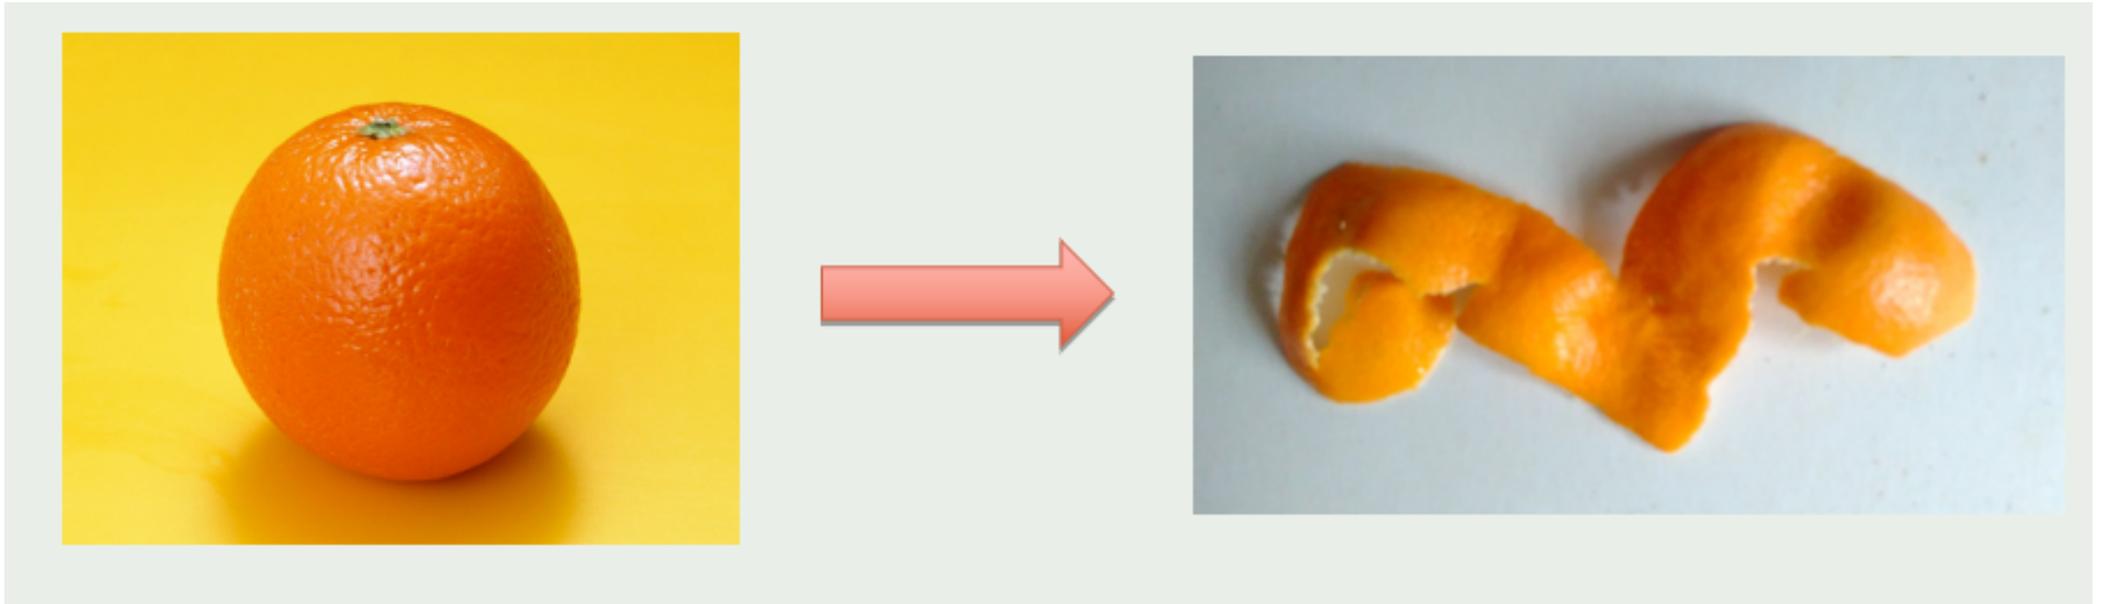

Things to remember!

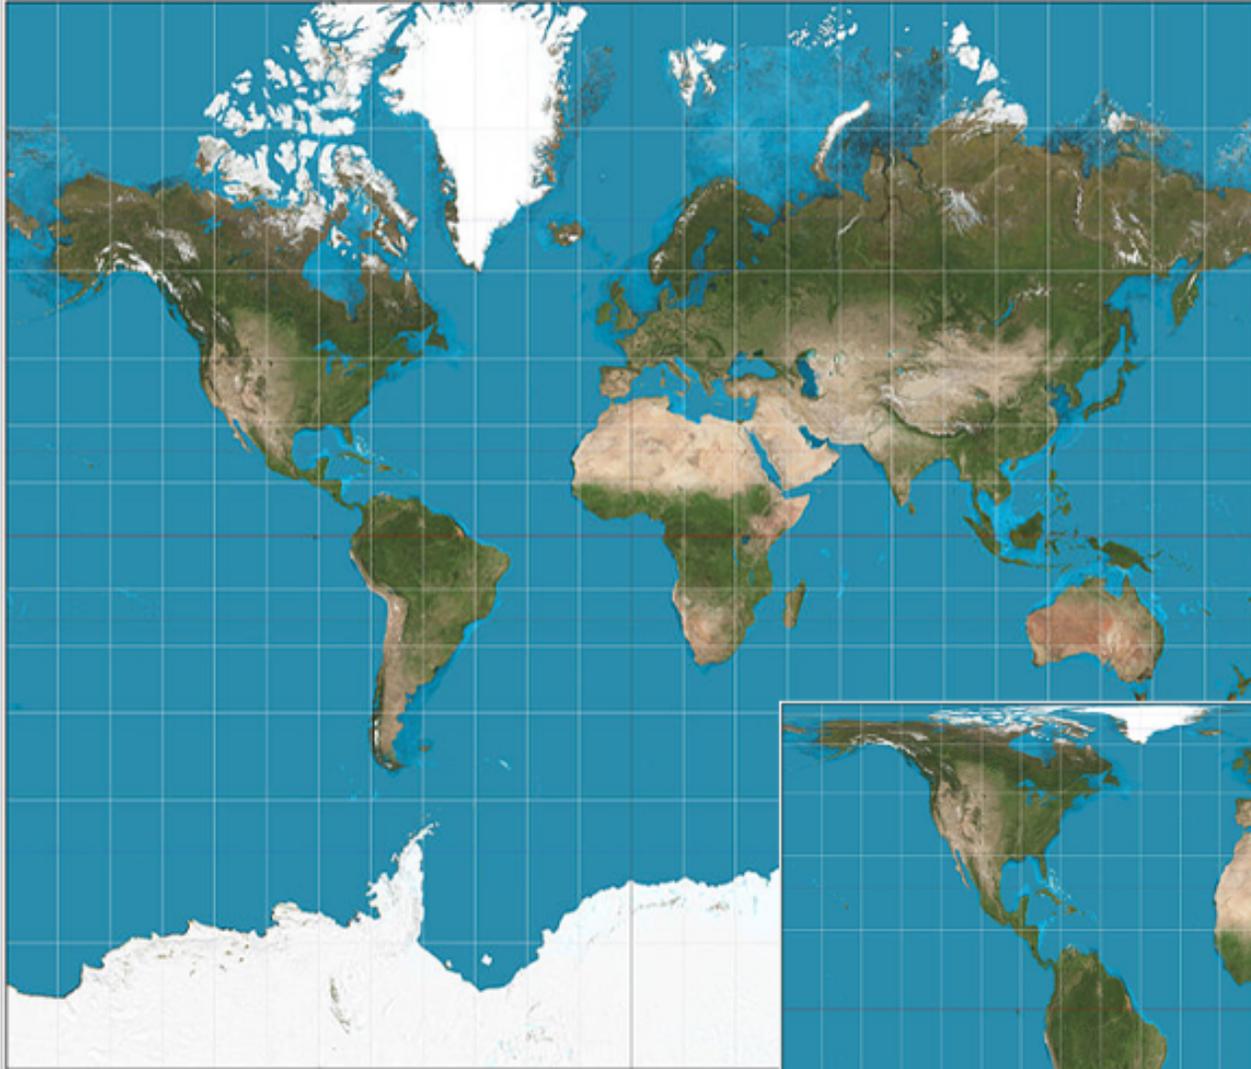

- Projections and Coordinate Systems
- How we show data
- Many many different types

Projections

- Projection - going from a sphere to a flat surface

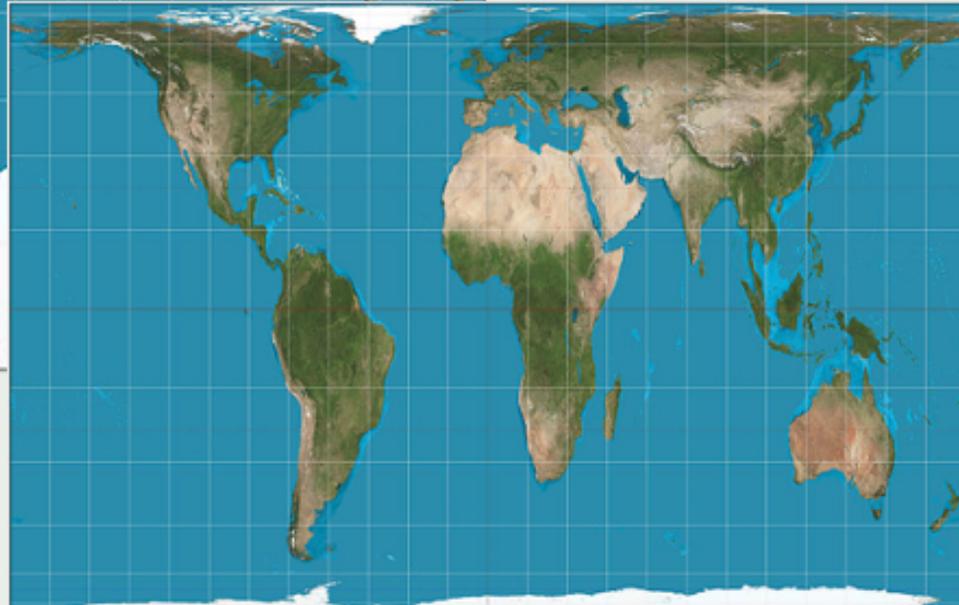

<http://www.hdwallpapersos.com/orange-fruit-hd-wallpapers.html>

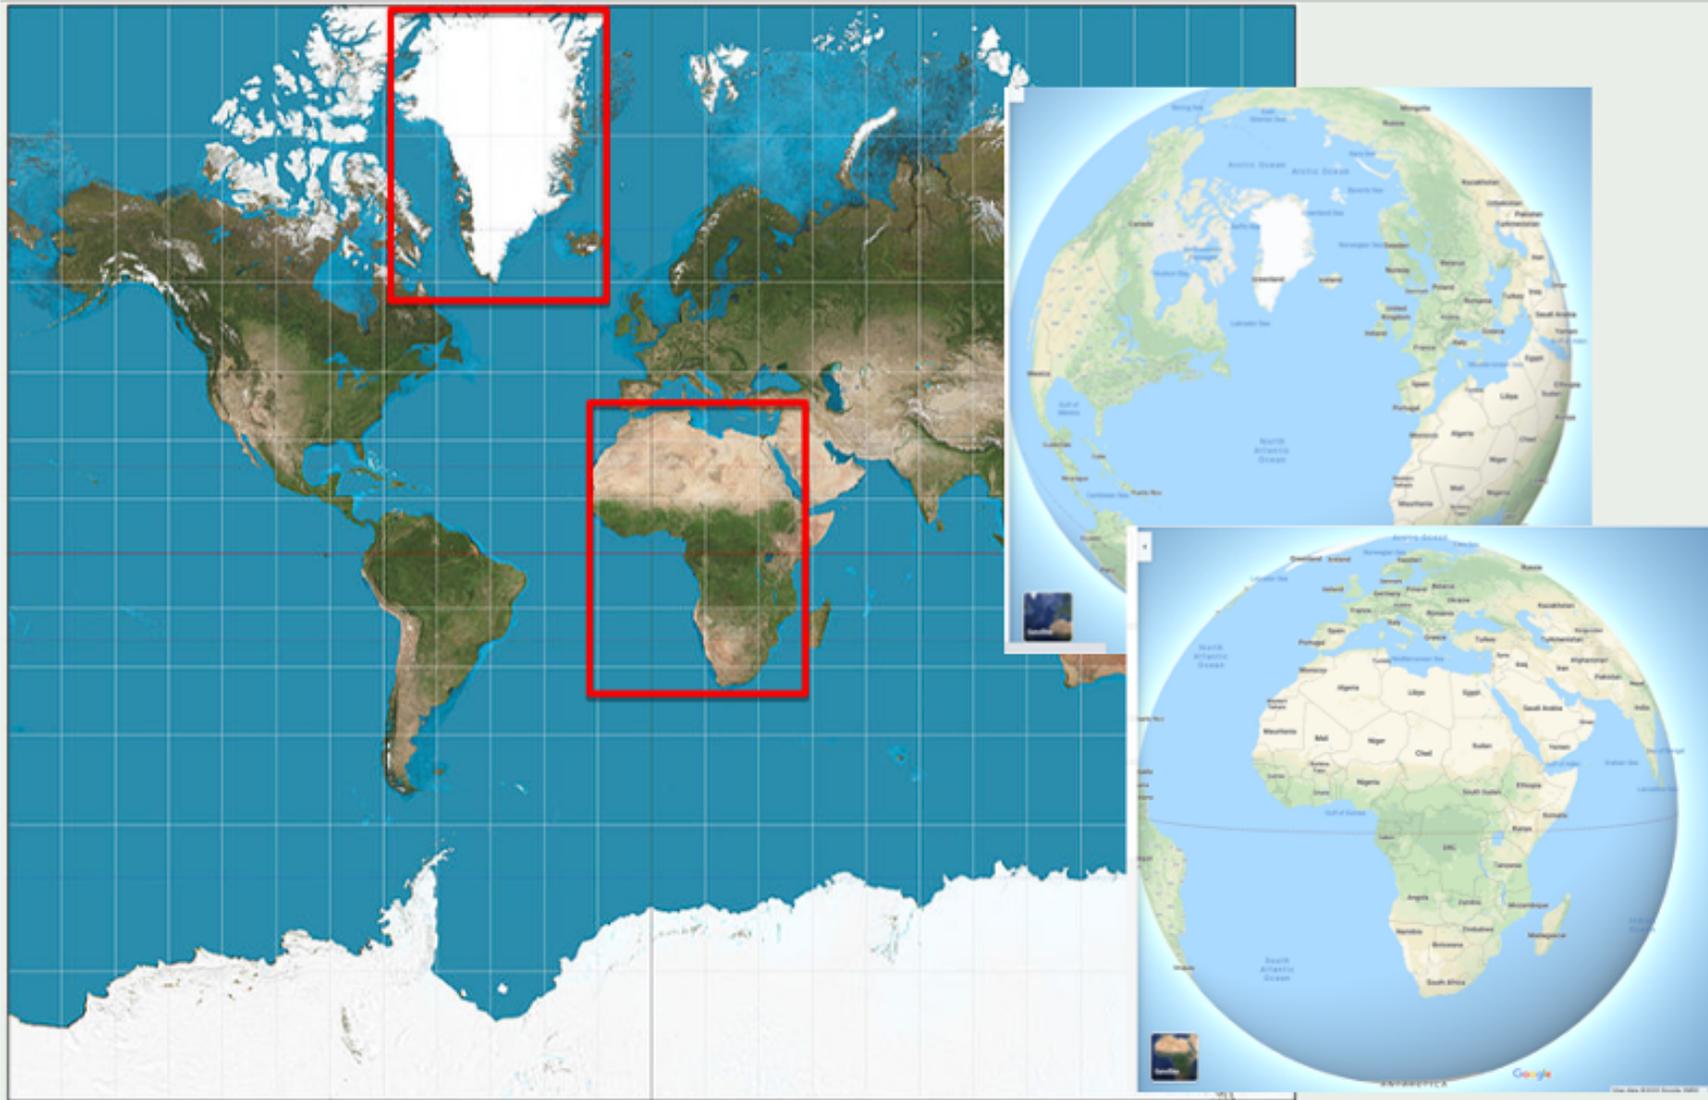

This file is licensed under the Creative Commons Attribution-Share Alike 3.0 Unported license. http://en.wikipedia.org/wiki/File:Mercator_projection_SW.jpg

Mercator projection

Gall-Peters projection

This file is licensed under the Creative Commons Attribution-Share Alike 3.0 Unported license. http://en.wikipedia.org/wiki/File:Gall%E2%80%93Peters_projection_SW.jpg

Africa: 30 million sq km

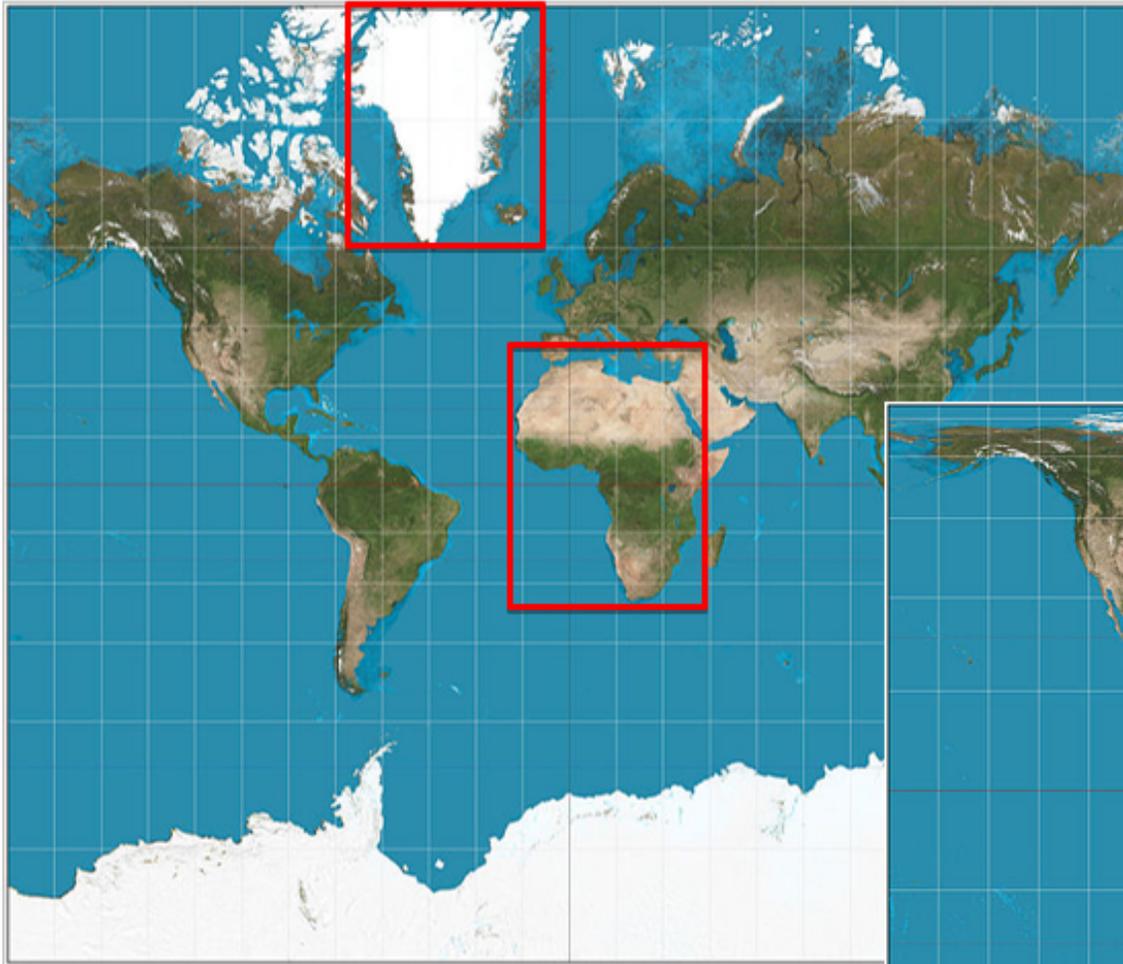

Greenland: 2 million sq km

Mercator

- *The son of a poor shoemaker near Antwerp, Belgium*
- *The Father of Modern Cartography*
- *By Mercator's Projection the navigators of the succeeding centuries sailed on their voyages of discovery*
- 1569

Sefton Park

Gall-Peters projection

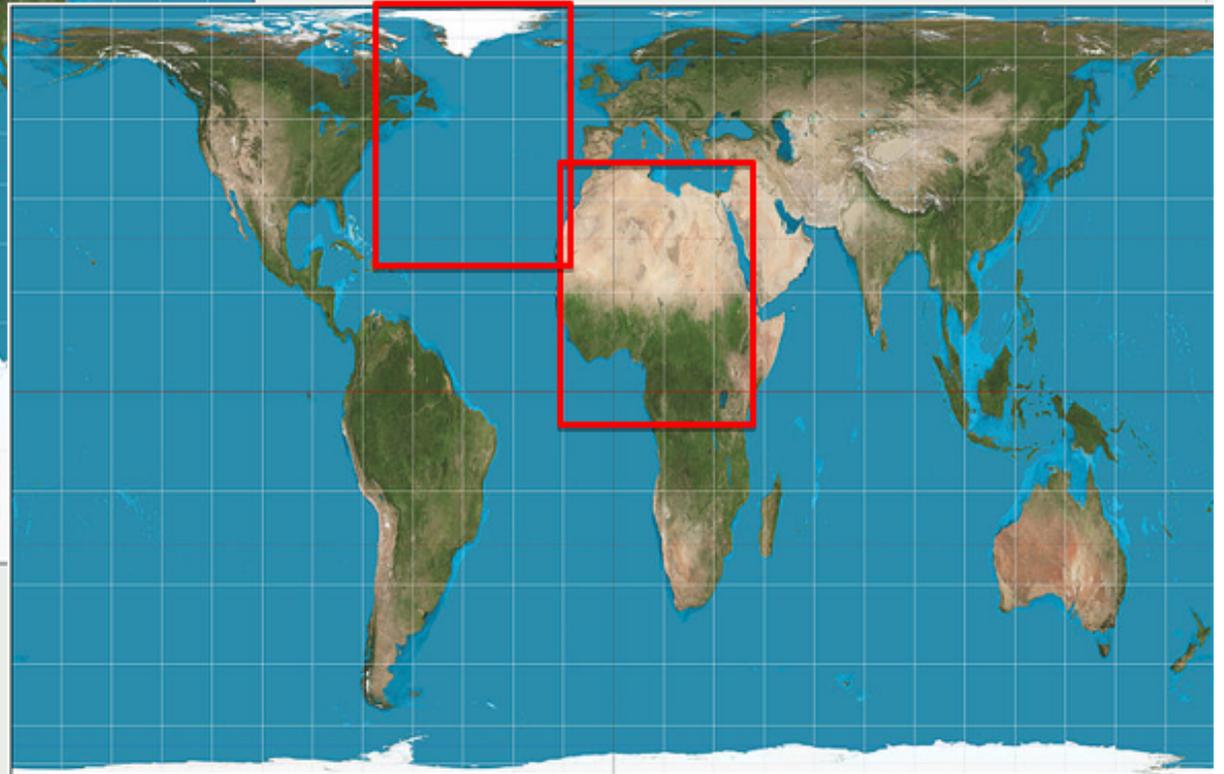

Mercator projection

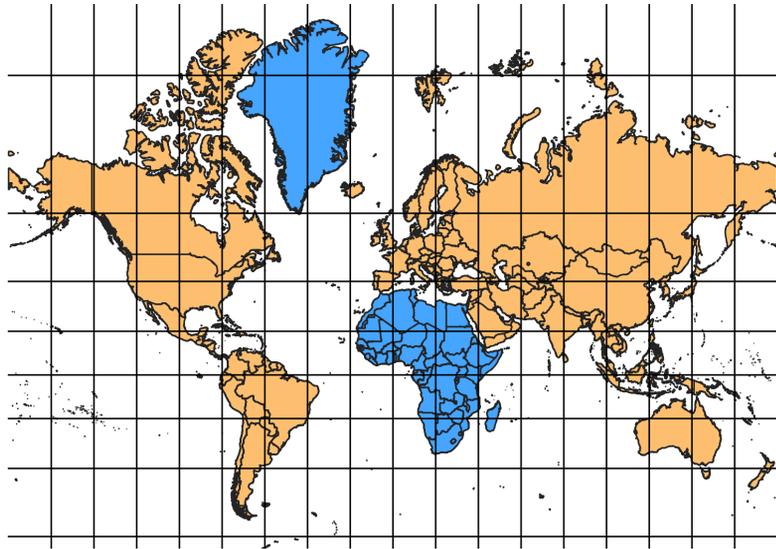

Reprojection

Can't maintain area and angles

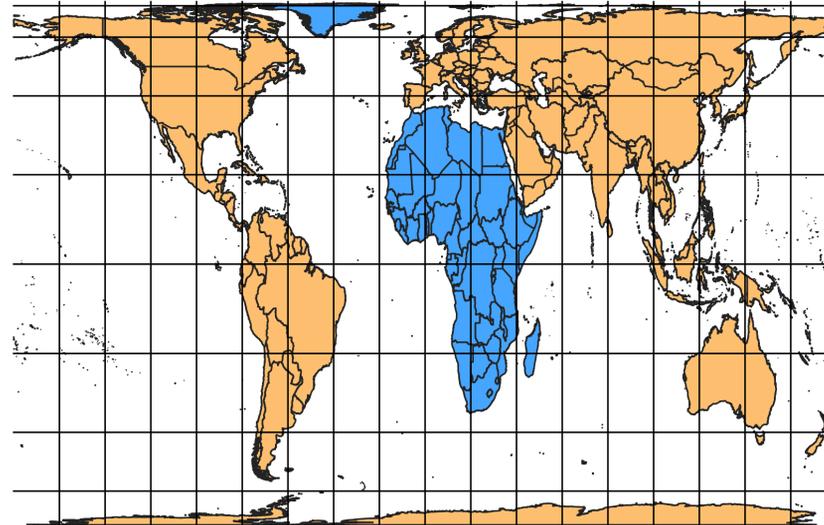

Mercator: **angles**

Peters: **area**

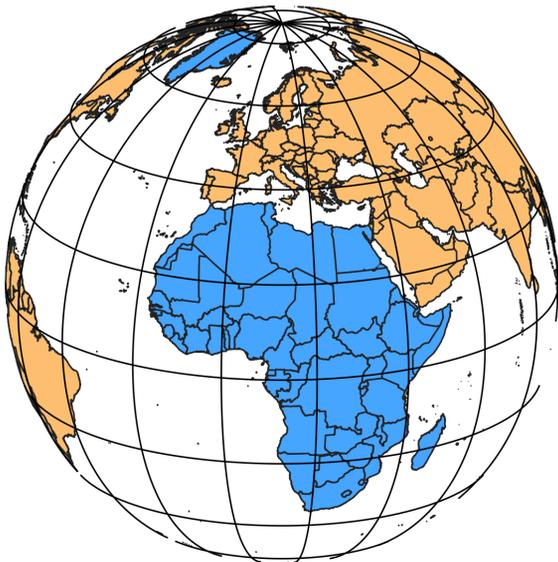

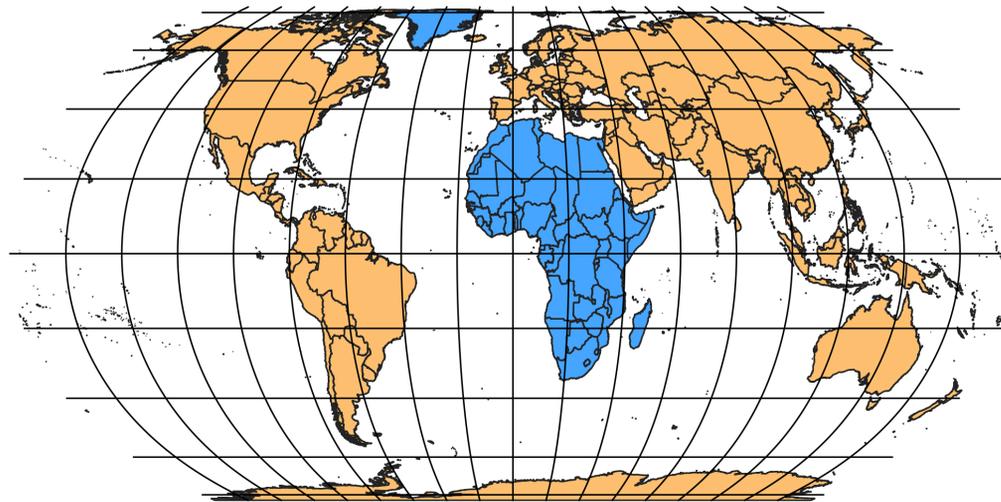

a) Mercator EPSG: 3395

b) Peters EPSG: SR-ORG:22

c) Adjusted version of The World From Space ESRI: 102038

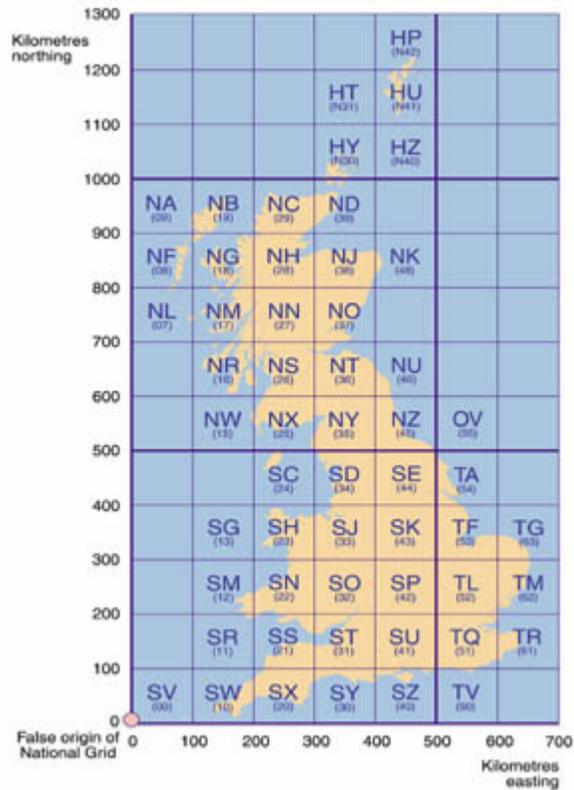

d) Equal Earth Greenwich EPSG: 8857

Coordinate Systems

How we specify location

Coordinate Systems

- British National Grid
- *Easting: 619301*
- *Northing: 307416*

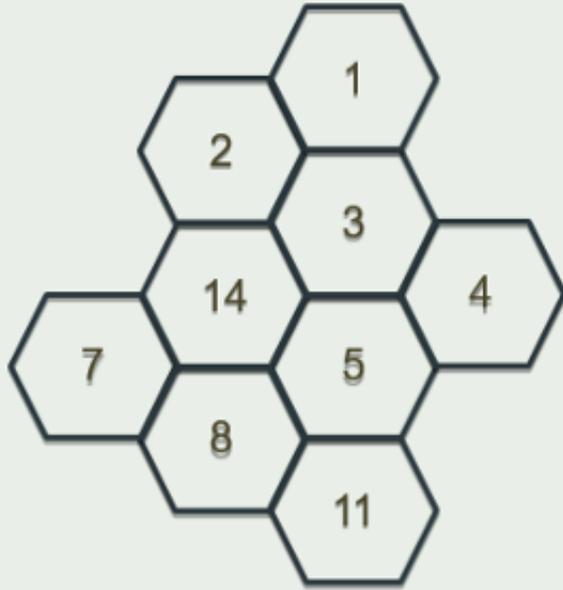

Strengths and Weaknesses

- You need **data** to be able to do anything
- Availability of data is key
- As is quality of data, who collected it, bias, etc.
-
- Can be quite quantitative - not everything can be quantified!
- Some qualitative GIS, but very much the junior partner
- Participatory GIS an interesting area

Data

- where does it come from?
- **spatial & non-spatial** data
- **spatial** - the geographic areas
- **attribute data** - the spreadsheet

Spatial Units

- Many many different spatial units
- Countries, counties
- Local authorities, GOR
- MSOA, LSOA, OA

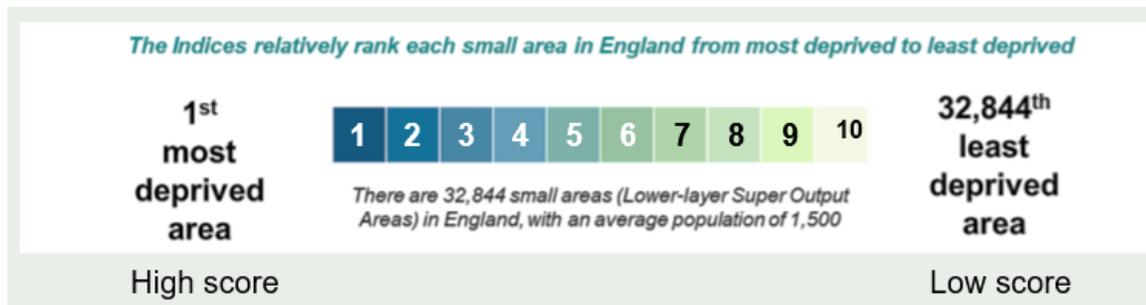

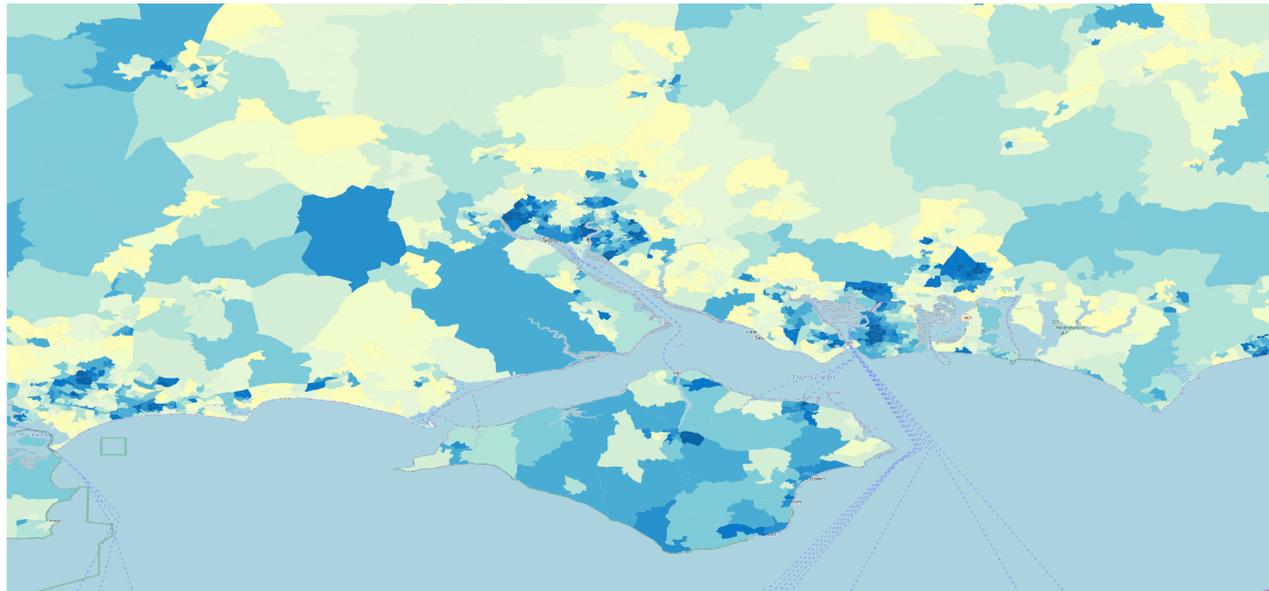

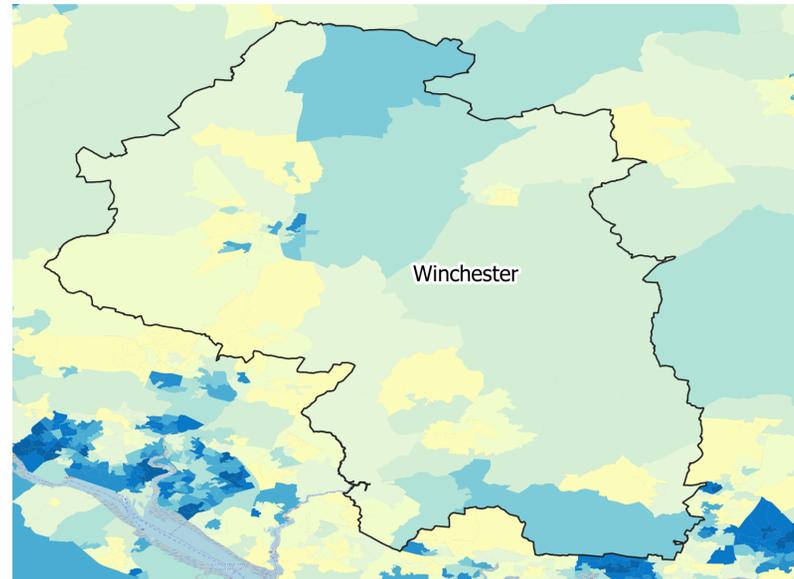

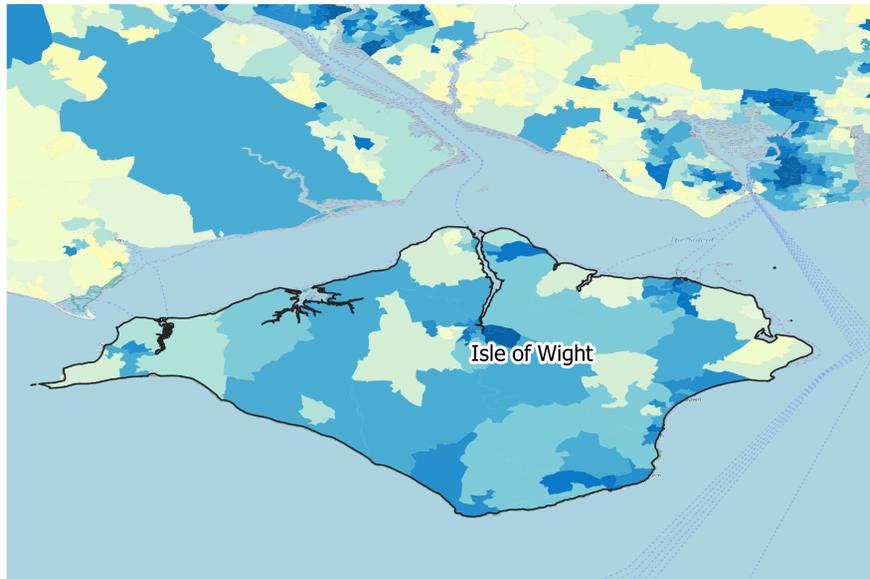

IMD - Index of Multiple Deprivation

- A measure of deprivation
- 2019 (England)
- 2019 (Wales)
- 2020 (Scotland)
- Rank, score & decile

England: 7 domains

- Income
- Employment
- Health
- Education
- Access to Services & Housing
- Crime
- Living Environment

IMD Deprivation Decile

- 1 More deprived
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9
- 10 Less deprived

Local Authority boundaries

0 5 10 15 20 25 km

- Ethnicity
- Health
-

GIS Software

- ArcGIS Pro most popular commercial product
- QGIS most popular open source
- R / RStudio open source, command line based
- Reproducible analysis becoming more important
- *All can be useful*

New developments

- AI
 - Some automated interpreting of satellite data
 - Houses / buildings / water / fields
- LLM / ChatGPT / Bard
 - Clear learning / assessment challenges
 - Also clear learning potential
 - Potentially really useful for writing code

Common issues in GIS

- **Coordinate systems**

- “9 out of 10 problems when using GIS results from using the wrong coordinate system”

- Finding (the right) **data**

- “You can easily spend 50% of the time of your project looking for and bringing in data”

- **Postcodes** as geocoding

- “WC1E 6BT” is a great way of asking people where they live, a residential postcode unit is about 10 - 15 houses

- But (e.g. in Wales) this can vary from 0.6 ha (a football field) to 5404 ha (20 sq miles, ~ Ealing)

Moving forward

- Books
 - [GIS: Research Methods](#) | *First chapter free*
 - [Cartography: An Introduction](#)
 - [Discover QGIS 3.x](#)
 - [Using R as a GIS](#) | *preview chapter*
- [Training courses](#) | June *Intro to R* | July *Essex Summer School*
- [Data](#) | [Free GIS Data](#) | [GeoBoundaries](#)
- [Looking at other people's maps](#) | [#30DayMapChallenge](#)

Thank you :-)

- Questions
- Case studies
 - *“Nick will pick one or two case studies to talk through the process of how we might go about mapping or doing spatial analysis on those projects”*
